T-Cell Protein Tyrosine Phosphatase (TC-PTP) Positive Control

(Human, full length, recombinant enzyme expressed in *E. coli*)
Cat# CY-E1351

Lot No.
For 100 Assays
(20 units/ μ L x 500 μ L)

Product Description: Human full length TC-PTP, containing a *N*-terminal GST tag, expressed in *E. coli*. Purified by GSH agarose chromatography. The TC-PTP Positive control is designed to use for CycLex T-Cell Protein Tyrosine Phosphatase (TC-PTP) Fluorometric Assay Kit [Cat# CY-1351]. The TC-PTP Positive Control should be added to the well at 100 units/well. Unused PTP1B Positive control should be stored at -70°C . AVOID FREEZE/THAW CYCLES!

Formulation: The recombinant TC-PTP Positive Control is supplied frozen in a buffer containing 100mM NaCl, 20mM Tris-HCl (pH 8.0), 1mM DTT, 1mM EDTA and 50% glycerol. Use a same buffer for dilution when needed.

Source: Human full length TC-PTP, containing *N*-terminal GST tag, expressed in *E. coli*.

Molecular Weight: The recombinant TC-PTP demonstrates approximately 64 kDa band by SDS-PAGE analysis.

Purity: The recombinant TC-PTP is greater than 90 % pure as determined by SDS-PAGE analysis.

Substrates: TC-PTP dephosphorylates a number of substrates, including phosphopeptide (EGFR residues 988 – 998; R-R-L-I-E-D-A-E-pY-A-A-R-G)

Inhibitors: Sodium Orthovanadate and RK-682 are known as effective PTP inhibitor.

Unit Definitions: One unit is defined as the amount of phosphatase required to release 1 pmol of phosphate from CycLex PTP substrate peptide-1 per minute at 30°C . Specific Activity will vary between production lots.

Storage: Store product at -70°C . For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, AVOID REPEATED HANDLING AND MULTIPLE FREEZE/THAW CYCLES.

Stability: Unopened vial at -70°C , for 1 year after delivery.
