

Human 14-3-3 Eta

Product Data Sheet

For Research Use Only, Not for use in diagnostic procedures

Human 14-3-3 Eta

Human, recombinant protein expressed in *E. coli*.

Cat# CY-R2145

Amount: 100 µg (2.00 µg/µl)

Lot:

Introduction:

14-3-3 protein family is highly conserved from plants to mammals and ubiquitously expressed cellular proteins. In mammals, there are seven isoforms encoded by a distinct gene (Beta, Epsilon, Gamma, Sigma, Eta, Tau and Zeta). More than 200 target proteins of the 14-3-3 protein family have been identified. Interactions of 14-3-3 proteins and the target proteins are dependent on phosphorylation of serine/threonine residue on the target proteins with some exceptions. 14-3-3 is deeply and widely involved in mitogenic signaling, cell cycle regulation and cell death/survival, suggesting the family plays important role in human neoplastic and neurological diseases.

Product Description:

Full length of human 14-3-3 Eta, containing an N-terminal GST tag, expressed in *E. coli*. and purified by GSH agarose chromatography.

Gene Information:

The gene accession number is L20422.

Gene Aliases:

Brain Protein 14-3-3 Eta Isoform, Tyrosine 3-Monooxygenase / Tryptophan 5-Monooxygenase Activation Protein Eta Isoform, Tyrosine 3-Monooxygenase/Tryptophan 5-Monooxygenase Activation Protein 1

Formulation:

Recombinant human 14-3-3 Eta is supplied frozen in phosphate buffered saline (PBS) containing 50 % glycerol.

Molecular Weight:

Recombinant human 14-3-3 Eta demonstrates approximately 54 kDa band by SDS-PAGE analysis.

Human 14-3-3 Eta

Product Data Sheet

For Research Use Only, Not for use in diagnostic procedures

Storage:

Store product at -70°C. For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, AVOID REPEATED HANDLING AND MULTIPLE FREEZE/THAW CYCLES.

Stability:

Unopened vial at -70 °C, for 1 year after delivery.
