

## Human S100A8

Human, recombinant protein expressed in *E. coli*.

Cat# CY-R2258

Amount: 100 µg (1.0 µg/µl)  
Lot:

**Introduction:**

S100A8 (MRP8, calgranulin A) is a member of the S100 family of calcium-binding proteins (22 members), generally coexpressed with S100A9 (MRP14, calgranulin B). A8 and A9 accumulate in inflammatory fluids and are postulated to be involved in the pathogenesis of chronic human inflammatory diseases such as rheumatoid arthritis (RA), cystic fibrosis, Crohn's disease, ulcerative colitis, allergic dermatitis, and infection. A8 and A9 are expressed in macrophages in the lining and sublining layers of the rheumatoid synovium. A8 and A9 comprise ~40% of the cytosolic protein of neutrophils and their intracellular expression has been associated with calcium sensing, myeloid cell differentiation, and a variety of inflammatory processes, particularly those involved in neutrophil activation and arachidonic acid transport.

**Product Description:**

Full length of human S100A8, containing an N-terminal GST tag, expressed in *E. coli*. and purified by GSH agarose chromatography.

**Gene Information:**

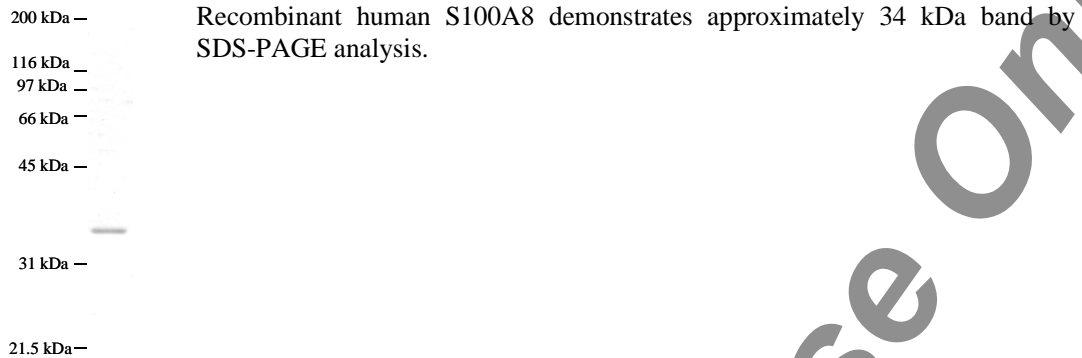

The gene accession number is NM\_002964.

**Gene Aliases:**

MRP8, Calgranulin A, CAGA, CFAg, p8, MAC387, 60B8Ag, L1Ag, CP-10, MIF, NIF

**Formulation:**

Recombinant human S100A8 is supplied frozen in phosphate buffered saline (PBS) containing 50 % glycerol.

**For Research Use Only, Not for use in diagnostic procedures****Molecular Weight:****Storage:**

Store product at -70°C. For optimal storage, aliquot target into smaller quantities after centrifugation and store at recommended temperature. For most favorable performance, AVOID REPEATED HANDLING AND MULTIPLE FREEZE/THAW CYCLES.

**Stability:**

Unopened vial at -70 °C, for 1 year after delivery.
